

OMIQ Academic Core Facility Site License

Support data analysis across your entire core facility, without the admin.

OMIQ is a modern, cloud-based platform built for collaboration, automation, and data management. It bridges classical and high-dimensional cytometry analysis, with integrations to GraphPad Prism and EasyPanel.

Built for core facilities

Core facilities serve a constantly rotating population of researchers: students, postdocs, PIs, and visiting researchers who dip in and out across the year. The site license is designed around that model. Add researchers freely throughout the year as your facility's needs change, then reconcile only once a year at renewal.

How it works*

Year one for new customers starts at the minimum cost, \$6,500, which covers 10 monthly active users (MAUs). Add as many additional researchers as you need during the year with no quotes, no admin overhead, and no retrospective billing.

At renewal, we calculate your average MAUs across the license term and send your renewal figure in advance, giving you time to review before your license lapses. Each seat above the 10-seat base is charged at \$250 per year. That total becomes your next year's cost, and the cycle repeats: add freely, reconcile at renewal.

Worked example

A facility renewing at an average of 20 MAUs:

10 base seats = \$6,500; 10 additional MAUs × \$250 = \$2,500; **Total renewal: \$9,000**

The facility may have had 30-50 real users with lower per month usage, or users who did not count towards MAU.

Details†

A "Monthly Active User" is any researcher who runs at least one Task (a discrete analysis run such as a UMAP, FlowSOM, or stats export; additional task types apply) in a given calendar month.

An institution may have, for example, 120 people with OMIQ accounts but if a different set of 10 people use it each month, they have 10 average monthly users. Users only count if they run a task as above.

This model is currently available to select Academic Core Facilities only. If you prefer not to renew under the site license, you can switch to standard academic pricing with a named number of seats at any renewal point.
